

HOSPITALS

A complete digital information solution for hospitals.
All patient information and search result on large 46-inch touch terminals, tablet or Smartphone.

Health Care institutions consist often of several buildings in a wide geographical area, which can make it difficult for patients and visitors to get an overview of the institution and surrounding areas, and find the shortest walking distance from A to Z.

Needy patients, employees and other visitors may be there for days and their relatives for hours, but they all need information on a language they understand. They need to find who, what and where, to which price or distance. They need information about healthcare, different departments, payment, transport, and shopping, rest and recreation activities inside and outside the hospital. They need information on meeting points, rooms and assistance.

TouchGuide's Healthcare Info system on large touch terminals or on users Smartphones is an effective help to present Health Care institutions services inside, as well as various activities near or around the institution.

Benefits

- A total patient solution for information and way finding experience.
- Dynamic bulletin boards showing key messages, patient information and guidance sent to smartphones
- A new and more effective way of communication with patients, visitors and staff.
- All services, maps and general information available at the same location.
- Real-time information for public transportation and 3 days weather forecast.
- TouchGuide administrative solutions for hospitals could be a part of your healthcare facility.
